Cancer Checks	CEA, AFP, CA 19.9, CA 72.4, PSA, B-HCG	CEA, AFP, CA 19.9, CA 72.4, HPV, CA 125, CA 15.3

What if you can detect cancer before it spreads and becomes harder to treat? What if you can monitor your treatment progress and spot any signs of recurrence? That's the power of tumor markers. Tumor markers are special molecules that are made by cancer cells or by normal cells in response to cancer. Measuring their levels along with other tests can help diagnose, treat, and prevent cancer.

- CEA** : Colon, Rectum, Stomach, Pancreas, Lung, Breast, and Ovary
- AFP** : Liver Cancer And Some Germ Cell Tumors (Testicular and Ovarian Cancer)
- CA 19-9** : Pancreas, Bile Ducts, Gallbladder, Stomach, Colon, and Ovary
- CA 72-4** : Ovarian and Gastric
- HPV** : Cervical and some other cancers of the Genital and Oral Regions
- CA 125** : Ovarian and some other cancers of the Female Reproductive System
- CA 15-3** : Breast Cancer
- PSA** : Prostate Cancer
- B-HCG** : some Germ Cell Tumors and some cancers of the Placenta

Preventive checkups are regular medical exams that aim to find cancer before it causes symptoms and when it may be easier to treat successfully. Healthy people may have high levels of tumor markers and some people with cancer can have normal levels of tumor markers. This checkup test can be used with other tests to confirm a cancer diagnosis and decide on further treatment.

Don't let **CANCER** catch you off guard. Take charge of your health with Cancer Check, they can save your life.
